

# NICCS Symposium

9<sup>th</sup> September 2021

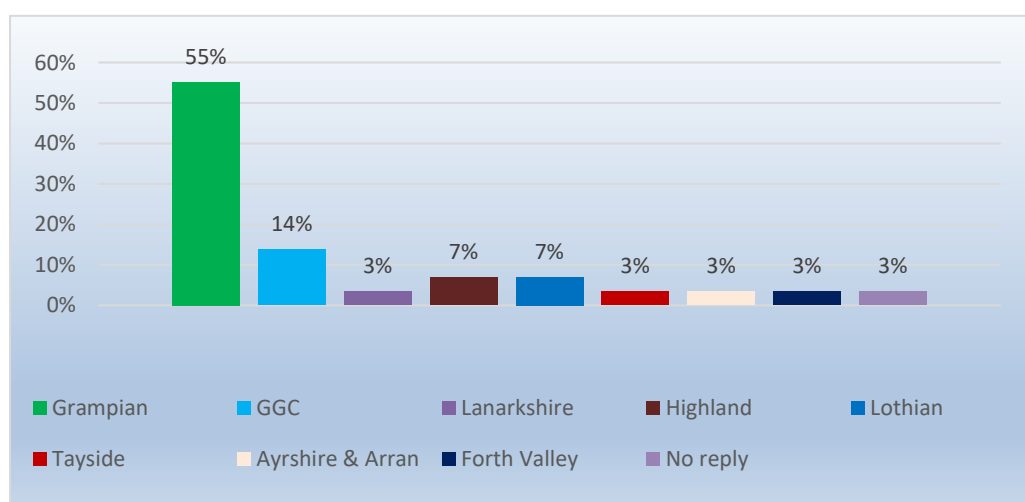

## Evaluation Report

There were 74 people attending NICCS online Symposium, 29 questionnaires were returned and the results are below:

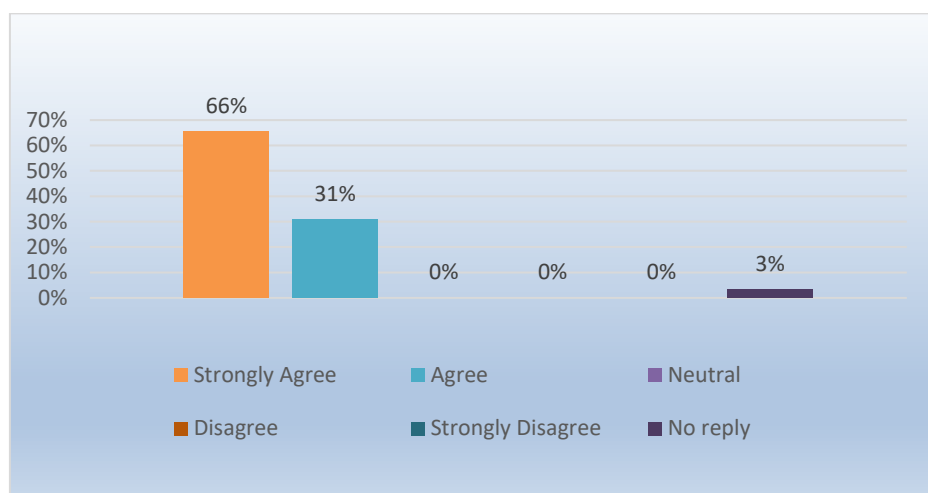

### Q1: Please indicate your profession

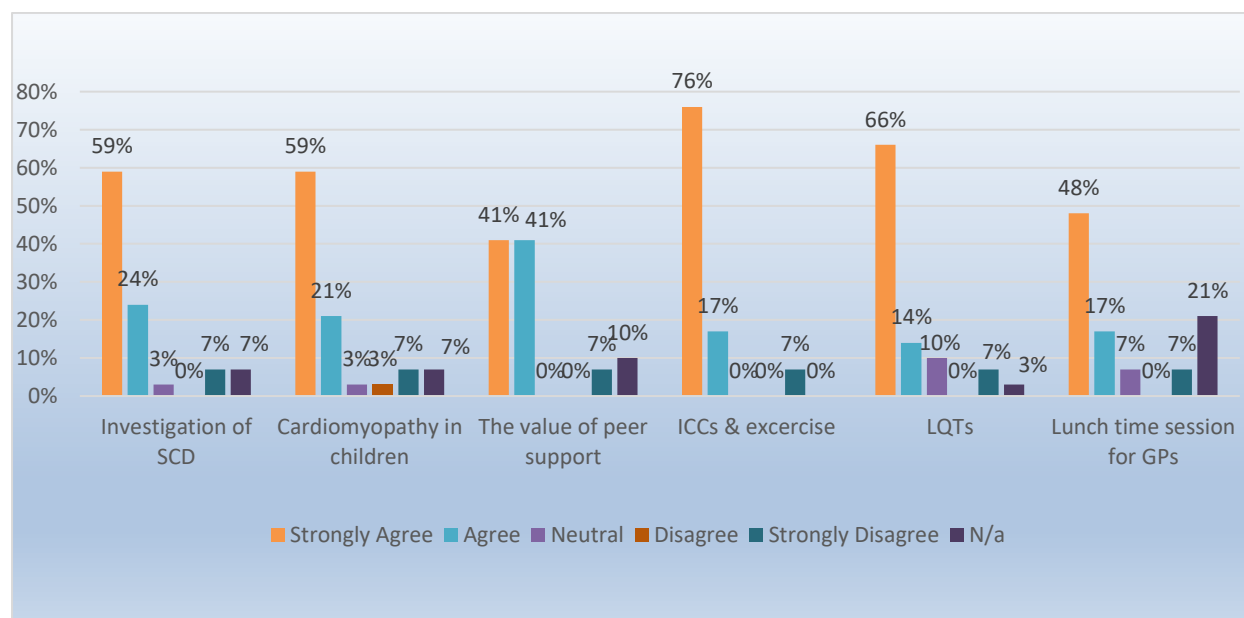

### Q2: Please advise your health board area

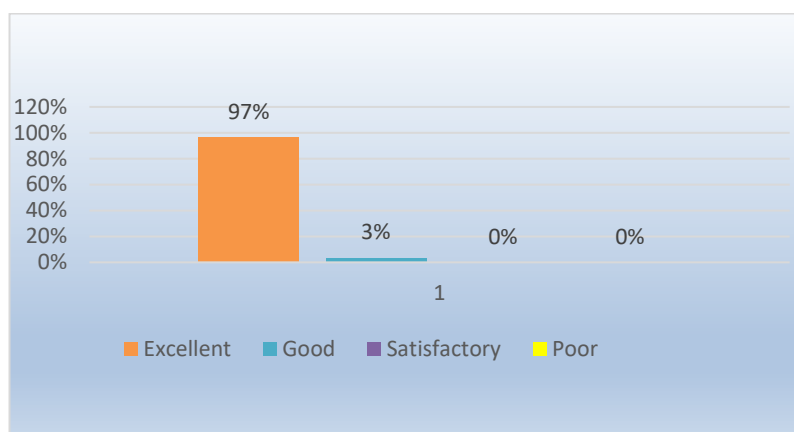

**Q3: The purpose of the morning session was to give an update to an ICC community on latest national developments/pathways/guidelines. Would you say this objective had been met?**

**Q4: How relevant were the following presentations to your educational needs?**

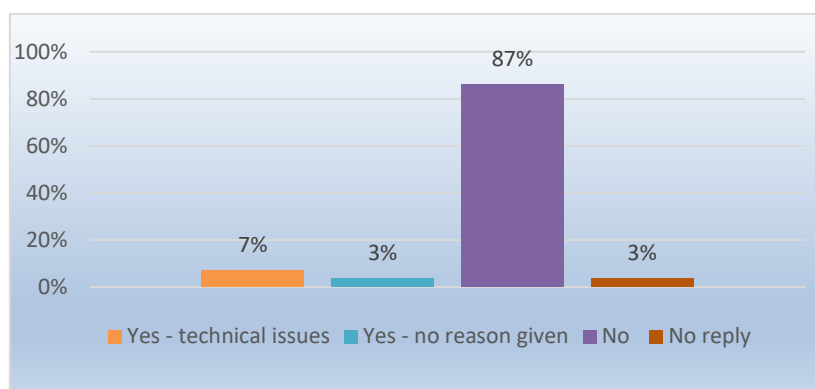

**Q5: How do you rate the overall quality of education provided by the event?**

**Q6: What impact will this event have on your future practice?**

- Greater awareness of the clinical and patient perspectives, important as lab scientists to put our work into context.
- More confidence in discussing exercise with my patients.
- Learnt things today that I can take to my practice with families
- Improving my knowledge and awareness particularly of issues around LQTS. Also, awareness of important work done by Cardiomyopathy UK charity and feel confident in signposting patients to them
- It provided an excellent insight into the service
- Improved knowledge in particular of Long QT which was very interesting and important especially given John Dean's case discussion where QT was normal until standing/supine ECG done
- Huge is considering changing age of screening for children
- Very informative - will use in everyday practice
- Better investigation of Long QT, changes to SCD practice
- Enhanced my knowledge so better able to correctly counsel patients with updated information
- The information gained will continue to improve the quality and depth of future patient assessment in a cardiac rehab environment
- Increase knowledge in certain areas of ICC.
- I attended as a patient representative however the SCD / investigation presentation was fascinating, the ICC regards children was excellent
- The learning from the informative talks has raised my awareness of ICCs and the important work being carried out and developed and the importance of referring appropriate patients to an ICC Specialist for family follow up. .to
- Useful to know that there may be a shift towards testing children at a younger age due to arrhythmia risk
- It keeps me up to date for seeing patients
- Of use at the ICC
- Long QT very useful for me as knowledge of this lacking.
- Greater awareness and confidence to refer on
- More confident in giving advice to patients

**Q7: Is there anything that could have been improved?**

**Q8: What topics should be discussed/provided by the Network at the future education events?**

- Not sure - it is all useful and interesting
- Maybe more rhythm disorders
- Perhaps more on aortopathies, amyloid
- More case studies
- Arrhythmogenic Cardiomyopathy, Variant interpretation, Genetic testing in children, family conflicts over testing, referral pathways
- Can the Network facilitate ongoing access to latest relevant research/ developments for members (other than through seminars)
- Maybe some lab based discussion about testing
- Arrhythmias and case reports are always interesting
- Brugada syndrome, Marfan syndrome
- Genetic diagnosis from post mortem cases
- A psychologist speaker would be really interesting and appropriate.
- What psychological and/or practical support can a generalist health care provider offer a patient / family affected by an ICC
- More on the results of genetic testing.
- Update about clinical trials, recruitment in Scotland/UK, encourage trainee/student talks relating to ICC

**Q9: Any other comments?**

- Excellent session
- Thank you so much
- Excellent talks and just sorry not to have been able to attend first session
- Great symposium, good balance.
- Well organised; good speakers; look forward to seeing presentations etc online. Thank you for allowing me to attend as an observer.
- This was an excellent meeting. Thank you.
- Thank you for a very interesting morning
- I thoroughly enjoyed the event and great to see the passion and dedication these HCP devote to inherited cardiac conditions.
- Face to face meeting when possible would be nice occasionally

- Audience participation lacked a bit, but that not the fault of organisers; think it is harder to interact over teams in comparison with in persons meetings.
